Technical Image Quality Comments:

Medical Image Quality

- | | |
|--|---|
| 1 Meets Technical Standards: | The image and/or images meet technical standards to support an accurate, diagnostic interpretation. |
| 2 Marginally meets technical standards: | The image and/or images marginally meet technical standards, however this is not expected to affect the interpretation and/or require additional imaging. |
| 3 Fails to meet technical standards: | The image and/or images do not meet technical standards, and could affect the interpretation and/or require additional imaging. |
| 4 Fails to meet technical standards: | The image and/or images do not meet technical standards, and would reasonably be expected to affect the interpretation and/or require additional imaging. |
| 5 Sentinel event: | The image and/or images do not meet technical standards, and may contribute to a serious unexpected or unanticipated outcome, including death, serious physical or psychological injury, or the risk thereof. |

Technical Image Quality

The examination protocol was followed.

The patient was properly positioned for imaging.

There are no technical artifacts present.

Patient demographics and other identifying patient information are accurate.

Markers and/or other notations for position are present.

Total Imaging Quality Score

The Total Imaging Quality Score (TIQS) is the technologist's score out of a possible 200 points (comprising of medical image quality and technical image quality scores). The TIQS is derived from all completed technologist review tickets and their respective scores. The Fortis Qualitas threshold is 180 points or greater.
